GEN5™

Friction-Fit Extender

Same GEN5™ body, with a factory installed, friction-fit 2mm contoured extender for one-stage surgery

Smooth Neck with Gauge Lines

Accommodate uneven ridges and immediate extraction sites by varying insertion depth

Cutting Grooves

Two full-length, self-tapping cutting grooves

Restorative Flexibility

Friction-Fit extender can be converted to standard MUA, Overdenture Abutment or a variety of Abutment Options

Straight Neck

Crestal bone seal and increased stability

Progressive Thread Depth

Double-lead, reverse buttress threads for increased bone contact

Tapered Body

Tapered body for increased initial stability

Two Platforms

Color-coded internal-hex conical connections

Smooth Neck with Gauge Lines

NizPLANT™

MANUFACTURING FACILITY

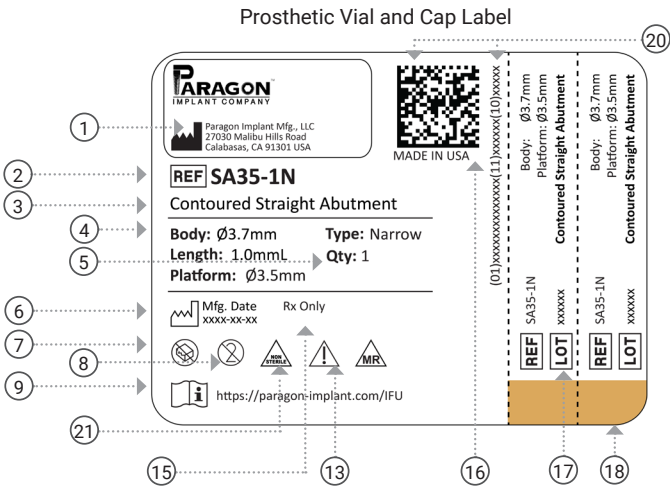

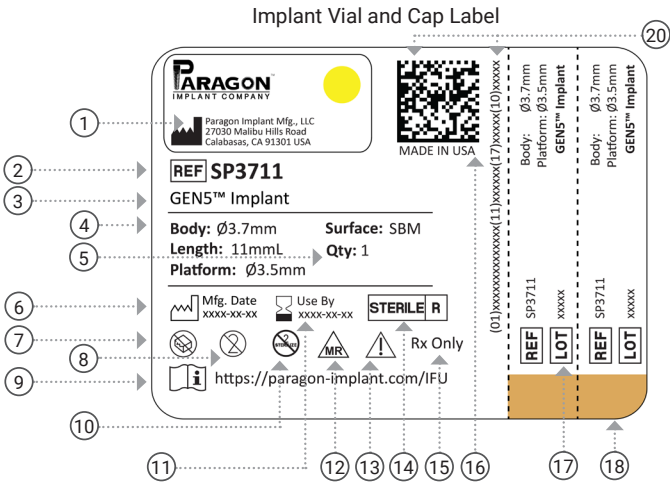

Paragon’s™ Manufacturing and Administration building was constructed by Dr. Niznick in 1994 for Core-Vent. It became the home of Zimmer Dental (2001-2004), Implant Direct® (2004-2010) and Implant Direct Sybron (2011-2014). The building now houses 25 CNC machines equipped with state-of-the-art technology to allow lights-out manufacturing. In addition, it has a Class 10,000 cleanroom for packaging and a department for applying surface treatments including anodizing and blasting.

Due to the small size of the implants and abutments, the stability and precision of the connection is critical to prevent complications, such as screw loosening or fracture. To meet these demanding requirements, Paragon has invested heavily in advanced manufacturing technology, including custom-designed cutting and inspection tools and precision gages. These tools complement our state-of-the-art quality department and give us total control over the manufacturing process.

Our CNC screw machines are integrated with the cutting-edge Caron process monitoring system, enabling continuous, lights out 24/6 production with minimal human intervention. This level of automation dramatically reduces production costs while ensuring every component meets our exceptionally tight tolerance specifications.

As a result, Paragon can offer implants at a price equivalent to what Dr. Niznick charged in 1990—while delivering innovative, American-made products. This combination of product innovation, precision engineering and highly competitive pricing will differentiate Paragon from its competitors, while making implant dentistry more affordable for patients and more profitable for dentists.

GEN5™

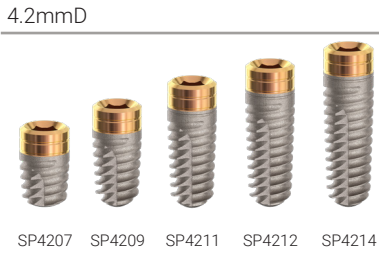

- Industry Standard 45° lead-in Conical Connection (Niznick US Patent #4,960,381) maximizes wall thickness on narrow implants
- Two Platform Diameters (3.5mmD & 4.5mmD) optimize emergence profile
- 1mm added to the standard lengths provides vertical flexibility for placement in uneven ridges and extraction sockets

GEN5™ IMPLANT CARRIER PACKAGING

The GEN5 implant is mounted on a platform specific, color-coded implant carrier.

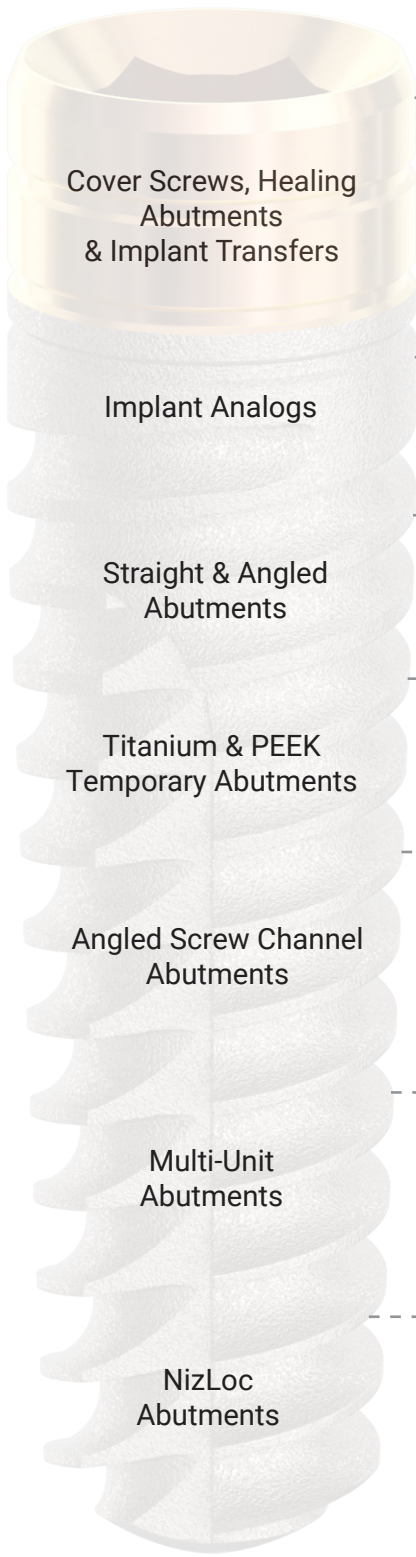

Prepare surgical site with sequential step drills and drill stops 	All Paragon Implants are supplied in gamma irradiated sterile packaging 	Each label has two tear-off labels for patient records 	Color-coded labels on top of the cap identify the diameter of the platform 
Drop implant assembly out of vial onto a sterile surface 	Engage internal hex feature of carrier with a hand or motor driven 2.5mmD driver 	Align implant/carrier assembly with osteotomy for insertion 	Insert implant 1mm Supra-crestal with external dimples for indexing hex 
Alternate: Insert implant Level with Crest 	The internal hex of the implant should be indexed with a flat on the labial/lingual 	Select cover screw, healing collar, temporary or final abutment 	Use friction-fit 1.25mmD hex tool to remove the Cover Screw or Healing Collar 
Option 1: Attach the Cover Screw (purchased separately) to implant 	For a 2-stage surgical procedure, suture soft tissue over the Cover Screw 	Option 2: Attach the Healing Abutment to implant 	For a 1-stage surgical procedure, suture soft tissue around the Healing Abutment 

GEN5+™ IMPLANT CARRIER PACKAGING

The GEN5+ implant is mounted on a platform specific, color-coded implant carrier.

Prepare surgical site with sequential step drills and drill stops 	All Paragon Implants are supplied in a gamma irradiated sterile package 	Each label has two tear-off labels for patient records 	Color-coded labels on top of the cap identify the diameter of the platform 
Drop implant assembly out of vial onto a sterile surface 	The Implant with pre-attached extender, is removed from the inner vial  Carrier is held inside Torque Wrench Insert with a friction-fit 2.5mmD Ruby Hex Tool	Align implant/carrier assembly with osteotomy for insertion 	Stabilize implant within the osteotomy. Remove carrier from Extender 
Align flats of 2.5mmD Hex Tool to labial to index position of extender's hex 	The internal hex of the extender is indexed with an internal hex of the implant 	Select appropriate height cover screw for tissue level and drop on surgical tray 	Remove the cover screw from the mount using friction-fit 1.25mmD hex tool 
Option 1: For a 1-stage surgical procedure, suture around the cover screw 	Option 2: Attach straight abutment to extender for cemented restoration 	Option 3 -Step 1: Remove the extender using the retrieval tool 	Option 3 -Step 2: Attach straight abutment to implant for cemented restoration

STEP DRILL DEPTH MARKINGS & CRESTAL BONE DRILLS (OPTIONAL)

You can easily verify the depth marking line on DLC drills by aligning the point of the drill with the ruler on the surgical kit.

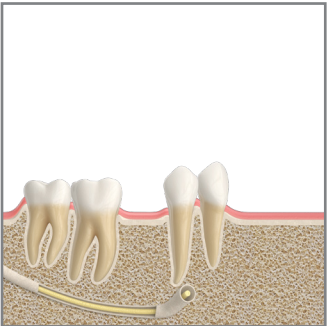

Use constant and profuse irrigation. During drilling, use an in-and-out motion. Move the drill up without stopping handpiece motor which allows the irrigation to flush away bone debris.

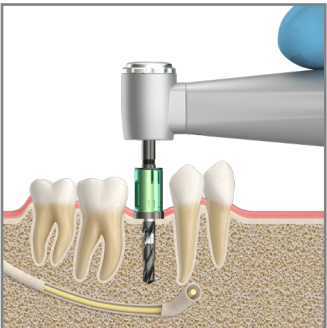

The Drill Stops provide the Implantologist control of what depth they prepare the oseotomy to, by providing a physical stop that fits over each drill.

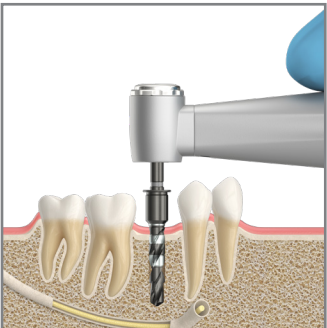

BONE DRILL SEQUENCE

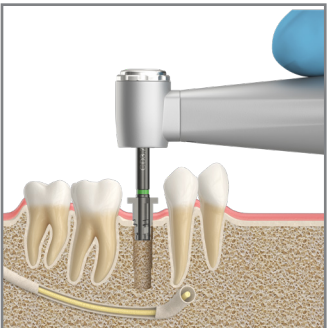

1. Implant site

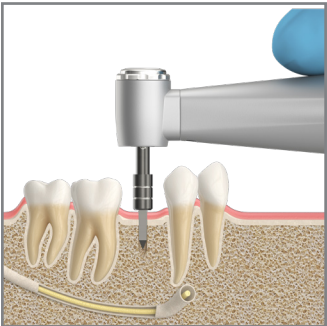

4a. SD2.3 with 11.5mm stop for placing implant 1mm supra-crestal

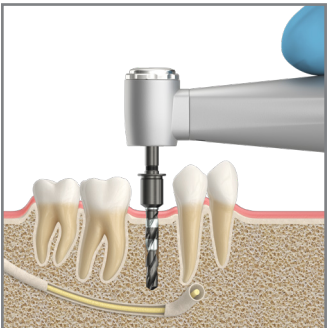

5b. Drill to 12.5mm with SD2.8 to place implant level with crest

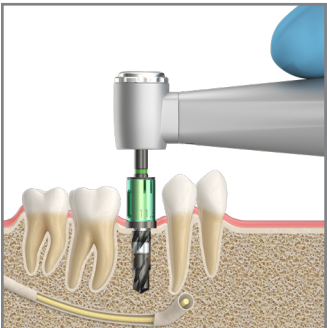

7. Dense bone: Use Crestal Bone Drill to open osteotomy CD3.7

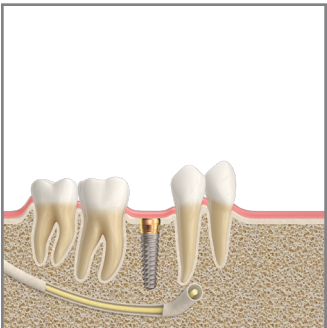

2. Pierce cortical bone with SD1.8

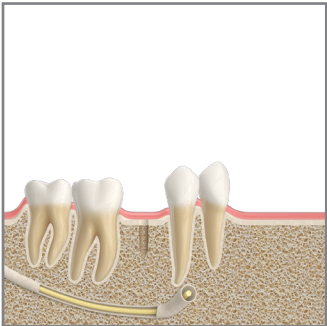

4b. Drill to 12.5mm with SD2.3 to place implant level with crest

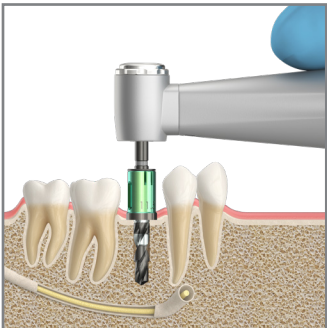

6a. SD3.4 with 11.5mm stop for placing implant 1mm supra-crestal

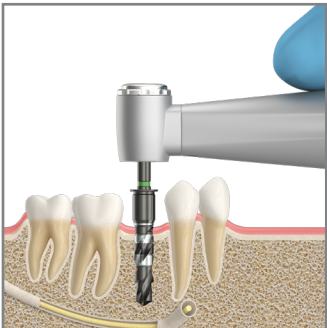

8a. Implant seated Level with Crestal

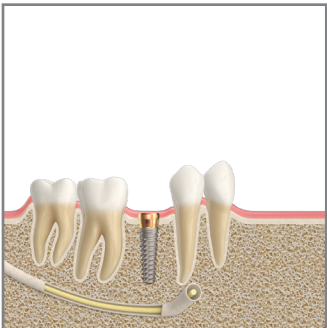

3. Pilot hole created with SD1.8

5a. SD2.8 with 11.5mm stop for placing implant 1mm supra-crestal

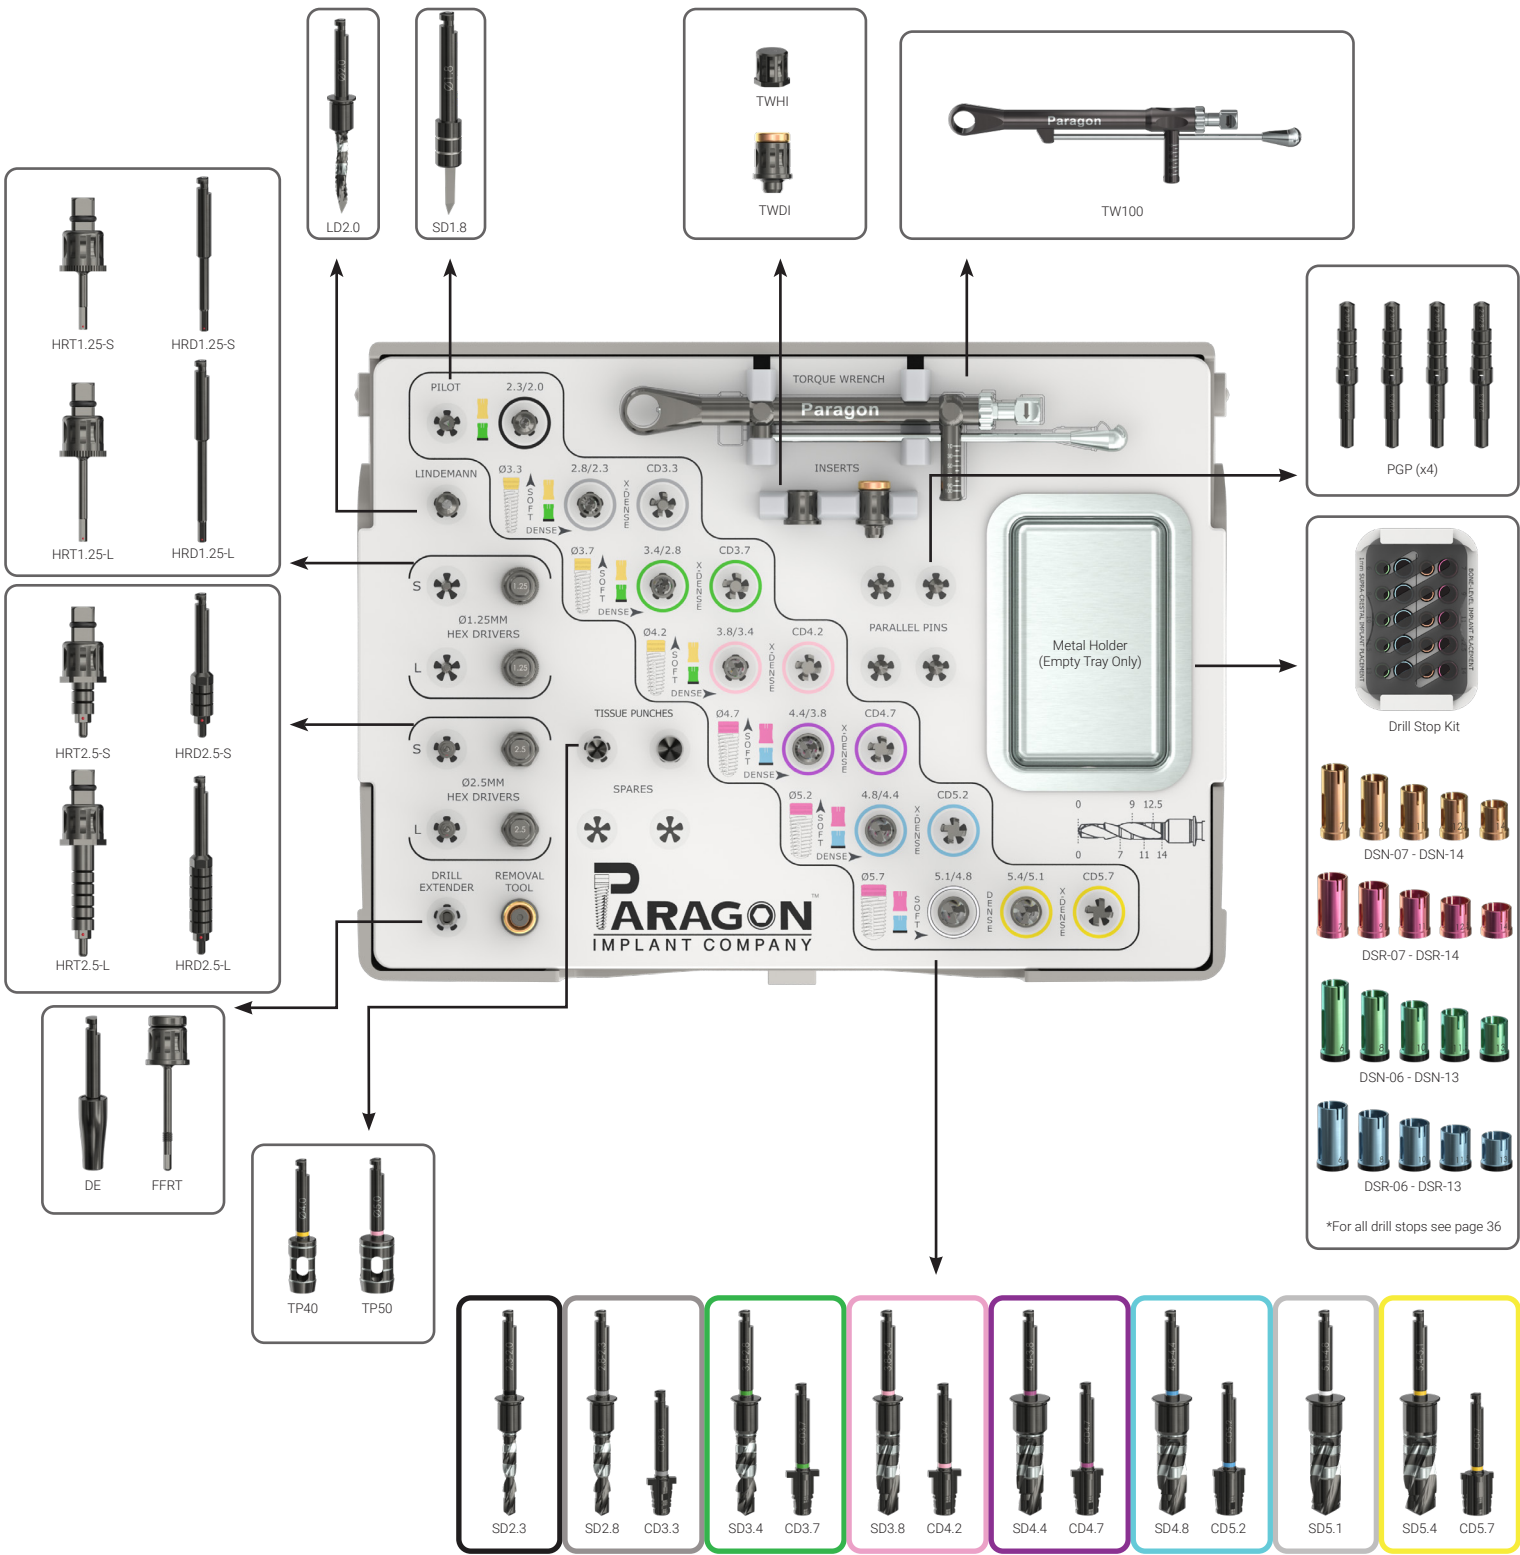

6b. Drill to 12.5mm with SD3.4 to place implant level with crest

8b. Implant seated 1mm Supra-Crestal

DRILL STOP
SEQUENCE AND PLACEMENT

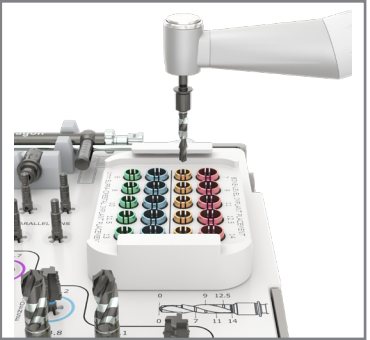

1. Drill Stop Kit is seated in the Surgical Kit

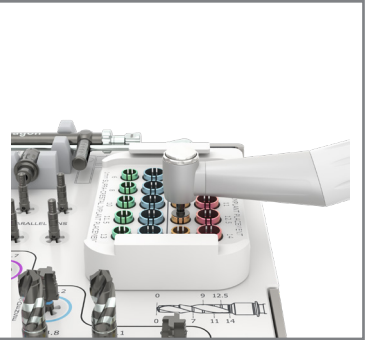

2. The Bone-level drill stops: gold stops are narrow, and pink stops are wide

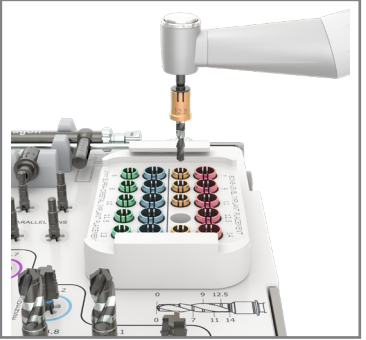

3. The 1mm supracrestal drill stops: green stops are narrow, and blue stops are regular (with black band on bottom)

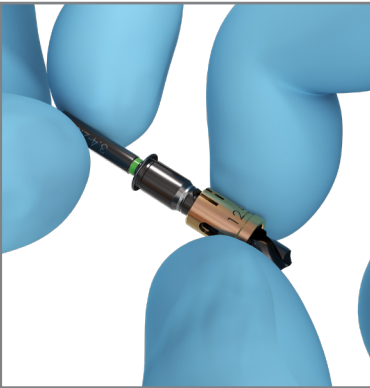

4. Handpiece with drill is shown floating above the Drill Stop kit

5. Drill is inserted into the selected drill stop.

6. Handpiece lifted with the drill stop now attached to the drill.

Placing the drill stop on the drill

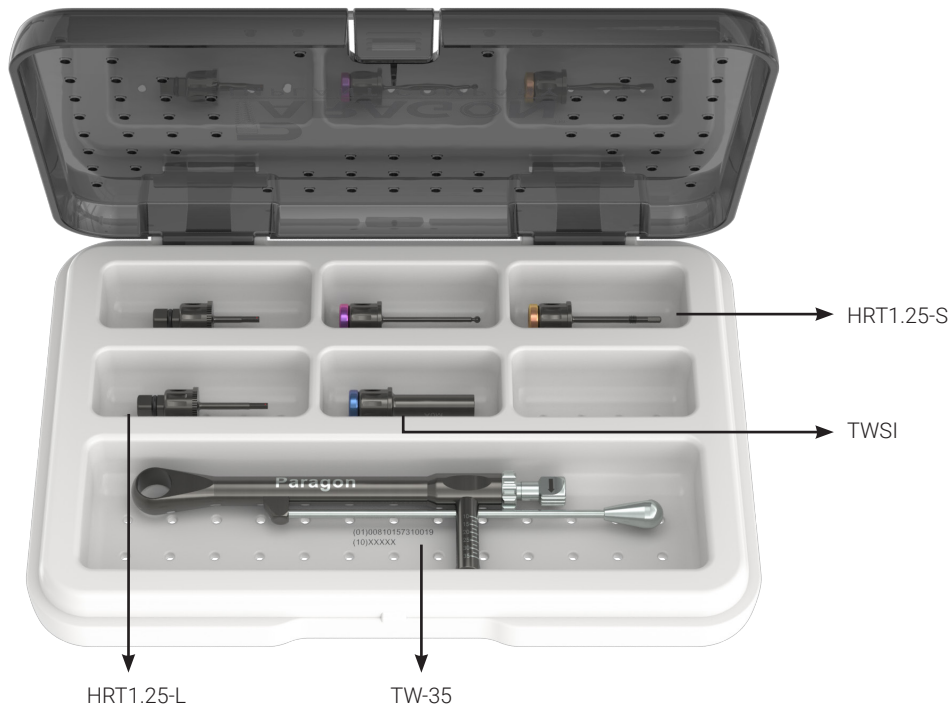

The Gold and Magenta Drill Stops create a socket depth equal to the overall length of the implant selected for placement bone level

The Green and Blue Drill Stops create a socket depth 1mm short of the overall length of the implant selected for placement 1mm Supra-crestal
